Product Introduction

S7 is a multi-function plug and play dual-screen laptop monitor that is portable, foldable. It can help quickly build a personal mobile studio. Provide a perfect solution for laptop users with multi-screen synchronous display and multi-screen separate display, which can improve your work efficiency by up to 50% and achieve efficient multi-tasking. It supports the same screen display of some models of Samsung, Huawei and others. It also supports the computer mode of the smart phone system as well as audio and video transmission, etc.

S7 holder is easy to use. Clamp the holder to the top of the computer screen, and it can be easily fixed without falling off. It can support the case of laptop from 13 inches to 17.3 inches, and can be removed and used as a single screen. The screen has its own support that can be adjusted for different angles, providing different fun experience for professionals, office workers, gamers, stock traders, entrepreneurs, programmers and students.

The S7 screen can independently adjust parameters such as brightness, sound, and contrast. It is equipped with Type-C interfaces, allowing for versatile video and data expansion without the need for a docking station. As long as it is a Type-C laptop with combined signal and power capabilities, you can achieve a seamless connection and display. Devices such as desktop computers, laptops, miniPCs, set-top boxes, and gaming consoles with HDMI output interfaces can directly connect to the display. However, the screen needs to be powered externally in order to light up (using the custom HDMI TO TYPE-C cable to connect the product to the computer).

Finally, S7 screen splitter can provide a complete 235 ° rotation on a single screen. You can choose your best view angle for the optimum visual experience.
